# TVS Diodes

Transient Voltage Suppression Diodes

# SM8SxxCA Series

#### Description

Transient Voltage Suppressor (TVS) is a circuit protection component that either attenuates (reduces) or filters a transient voltage spike (overvoltage), TVS diodes provide critical protection by going into avalanche breakdown within no more than a few nanoseconds after a strike, clamping the transient voltage, and routing its current to the ground.

# Applications

- Communication Equipment
- Security & Protection
- Industrial Control Equipment
- Power Supply
- Automotive Electronics
- New Energy
- Lightning Protection

# **Functional Diagram**

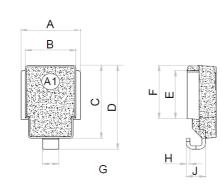

**Bi-Directional** 

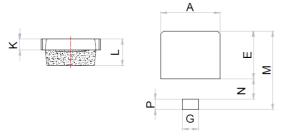

#### **Features**

- AEC-Q101 Qualified
- Junction passivation optimized design passivated anisotropic rectifier technology
- T<sub>J</sub> = 175 °C capability suitable for high reliability and automotive requirement
- Available in uni-directional polarity only
- Low leakage current
- Low forward voltage drop
- High surge capability
- Meets ISO16750-2 surge specification (varied by test condition)
- Meets MSL-1, per J-STD-020, LF maximum peak of 260 °C
- Compliant to RoHS directive 2011/65/EU and in accordance to WEEE 2002/96/EC

# Glossary

| ltem                      | Description                                                                                                                                                                                                                                                |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Vc                        | Clamping Voltage<br>Voltage across TVS in a region of low differential resistance that serves to limit the voltage across the device<br>terminals.                                                                                                         |
| V <sub>R</sub>            | Reverse Stand-off Voltage<br>Maximum voltage that can be applied to the TVS without operation.<br>NOTE : It is also shown as V <sub>WM</sub> (maximum working voltage (maximum d.c. voltage)) and known as rated stand-<br>off voltage (V <sub>so</sub> ). |
| I <sub>R</sub>            | Reverse Leakage CurrentCurrent measured at $V_{R.}$ NOTE : Also shown as $I_D$ for stand-by current.                                                                                                                                                       |
| V <sub>BR</sub>           | Breakdown Voltage<br>Voltage across TVS at a specified current $I_{T}$ in the breakdown region.                                                                                                                                                            |
| <b>I</b> <sub>РРМ</sub>   | Rated Random Recurring Peak Impulse Current<br>Maximum-rated value of random recurring peak impulse current that may be applied to a device.                                                                                                               |
| <b>P</b> <sub>M(AV)</sub> | Rated Average Power Dissipation<br>Maximum-rated value of power dissipation resulting from all sources, including transients and standby current,<br>averaged over a short period of time.                                                                 |
| <b>P</b> <sub>PPM</sub>   | <b>Rated Random Recurring Peak Impulse Power Dissipation</b><br>Maximum-rated value of the product of rated random recurring peak impulse current ( <i>I</i> <sub>PPM</sub> ) multiplies by specified maximum clamping voltage ( <i>V</i> <sub>C</sub> ).  |
| CJ                        | Capacitance<br>Capacitance across the TVS measured at a specified frequency and voltage.                                                                                                                                                                   |
| V <sub>FS</sub>           | Peak Forward Surge VoltagePeak voltage across an TVS for a specified forward surge current (IFS) and time duration.NOTE : Also shown as VF.                                                                                                                |
| I <sub>FS</sub>           | <b>Forward Surge Current</b><br>Pulsed current through TVS in the forward conducting region.<br>NOTE : Also shown as <i>I</i> <sub>F.</sub>                                                                                                                |
| $\alpha_{V(BR)}$          | Temperature Coefficient of Breakdown VoltageThe change of breakdown voltage divided by the change of temperature.                                                                                                                                          |
| I <sub>PP</sub>           | Peak pulse Current<br>Peak pulse current value applied across the TVS to determine the clamping voltage $V_{\rm C}$ for a specified wave shape.                                                                                                            |
| ŀτ                        | <b>Pulsed D.C. Test Current</b><br>Test current for measurement of the breakdown voltage $V_{BR}$ . This is defined by the manufacturer and usually given in milliamperes with a pulse duration of less than 40 ms.<br>NOTE : Also shown as $I_{BR}$ .     |

# TVS Diodes

Transient Voltage Suppression Diodes

#### SM8SxxCA Series

#### Usage

- 1. TVS must be operated in the specified ambient temp.
- 2. Do not clean the TVS with strong polar solvent such as ketone, esters, benzene and halogenated hydrocarbon, to avoid damaging the encapsulating layer.
- 3. Please do not apply severe vibration, shock or pressure to TVS, to avoid element cracking.

#### Replacement

- 1. If TVS is visually damaged, please replace it.
- 2. TVS is a non-repairable product. For safety sake, please use equivalent TVS for replacement.

#### Storage

- 1. Storage Temp. Range: (-55 to 150) °C.
- 2. Do not store the TVS at the high temp., high humidity or corrosive gas environment, to avoid influencing the solder- ability of the lead wires. The product shall be used up within 1 year after receiving the goods.

# **Environmental Conditions**

- 1. TVS should not be exposed to the open air, nor direct sunshine.
- 2. TVS should avoid rain, water vapor or other condition of high temp. and high humidity.
- 3. TVS should avoid sand dust, salt mist, or other harmful gases.

# Max. Typical Capacitance of TVS

The typical capacitance of TVS is listed in the specifications. Designers may refer to it when designing TVS in High frequency circuit.

#### **Installation Mechanical Stress**

- 1. Do not knock TVS when installing, to avoid mechanical damage.
- 2. Please do not apply severe vibration, shock or pressure to TVS, to avoid surface resin or element cracking.
