Ultra-Low Capacitance ESD and Transient Voltage Protection

SD0304F10U DFN1006

## Description

SD0304F10U is a low-capacitance Transient Voltage Suppressor (TVS) designed to provide electrostatic discharge (ESD) protection for high-speed data interfaces. With typical capacitance of 0.25 pF, SD0304F10U is designed to protect parasitic-sensitive systems against over-voltage and over-current transient events. It complies with IEC 61000-4-2 (ESD), Level 4 ( $\pm 15$  kV air,  $\pm 8$  kV contact discharge), IEC 61000-4-4 (electrical fast transient - EFT) (40 A, 5 / 50 ns), very fast charged device model (CDM) ESD and cable discharge event (CDE), etc.

## Pinout and Functional Block Diagram

Each SD0304F10U device can protect one high-speed data line. It offers system designers flexibility to protect single data line where space is a premium concern. The combined features of low capacitance, ultra-small size and high ESD robustness make SD0304F10U ideal for high-speed data port and high-frequency line applications, such as cellular phones and HD visual devices.
