
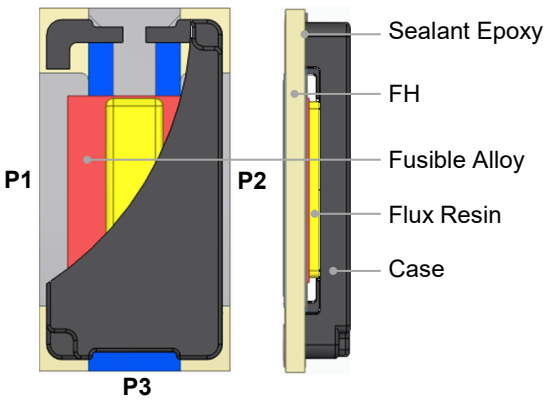
Description

Heat CutOff (HCO), also known as a three-terminal fuse, is an actuating component designed with overcurrent and overcharge protection functions. The main body of an HCO consists of FH, Fusible Alloy, Flux Resin, Case and Sealant Epoxy.

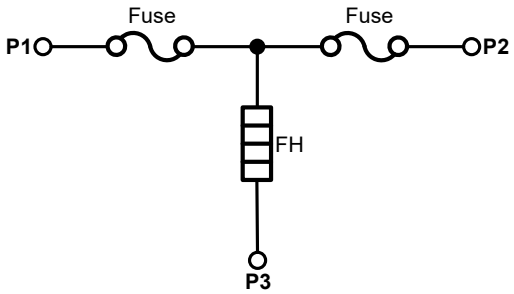
The Heat CutOff (HCO) is primarily used in secondary protection schemes for lithium battery charge and discharge circuits, providing redundant protection alongside the primary protection circuit. During the charge and discharge process of lithium batteries, if an abnormal overcurrent occurs, the fusible alloy self-heats and melts, disconnecting the charge and discharge circuit to achieve overcurrent protection. In the event of an overcharge, if the primary protection circuit's IC or the FET in the charge and discharge path fails, the secondary protection IC activates and energizes the Heater of the HCO. This causes the fusible alloy to melt due to the generated heat, disconnecting the charge and discharge circuit to provide overcharge protection. This mechanism ensures dual protection against both overcurrent and overcharge conditions.

The key features of SETsafe | SETfuse Heat CutOff (HCO) SHP series products include: Rated Currents of (30 / 45 / 60 / 75) A, Rated Voltages of 100 VDC, and an Operating Voltage Range of (3.0 ~ 106.0) VDC. These products have obtained UL, cUL and TUV certifications and comply with RoHS and REACH directives.

Structure Diagrams



Product Schematic



- P1 ~ P2 Main Circuit（MC）
- P1 / P2 ~ P3 Control Circuit（CC）

Application

- Electric Tool
- Storage Battery
- Portable Power Supply
- Electric Motorcycle
- Electric Bicycle
- Household Energy Storage

Features

- Surface Mount
- Overcurrent Protection
- Overcharging Protection
- Low Impedance, Low Power Consumption
- Controlled Fusing Time ≤ 60 s
- Non-Resettable
- RoHS & REACH Compliant

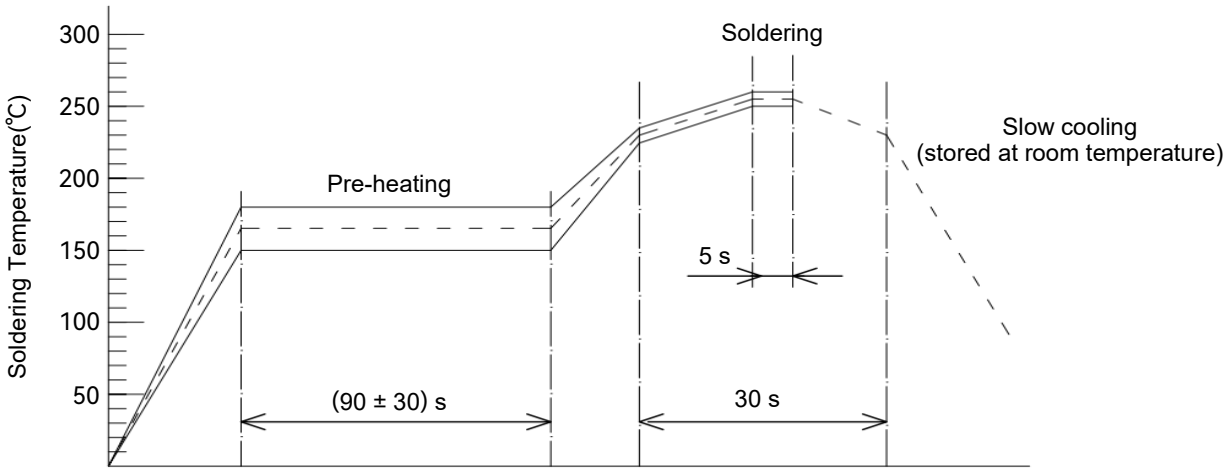
Current Carrying Capacity	100% x I_r, no melting											
Current Fusing Time	200% x I_r the fusing time is < 1 min											
Controlled Fusing Time	In operation voltage range, the fusing time is <1min											
Endurance Test 1	500% x I_r power on 5 ms, power off 995 ms, 100,000 cycles											

Note:

1. For P1 - P2, please refer to the structure diagram.

Soldering Parameters

1. Reflow Soldering Method (For Reference Only)

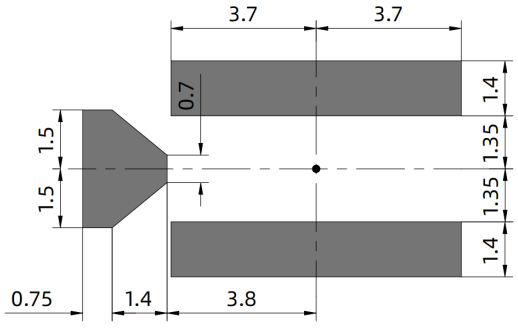


Peak Temp: (255 ± 5)°C 5 s
(230 ± 5)°C 30 s

2. Recommended Hand Soldering Parameters

Solder Iron Temp: (400 ± 5) ℃
Soldering Time: (3 ± 1) s

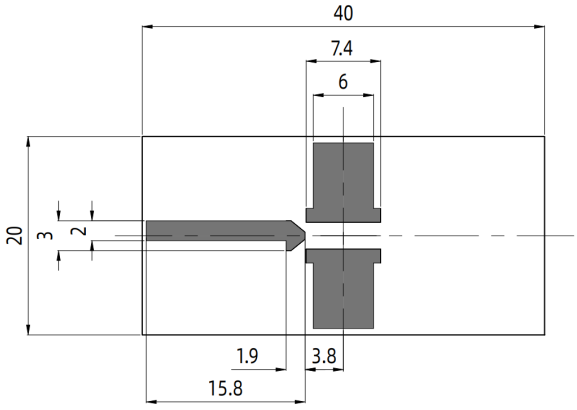
Recommended mounting size (Unit: mm)



Note: This is only the recommended size and does not guarantee the mounting quality. Please verify it in combination with your company's design guidelines.

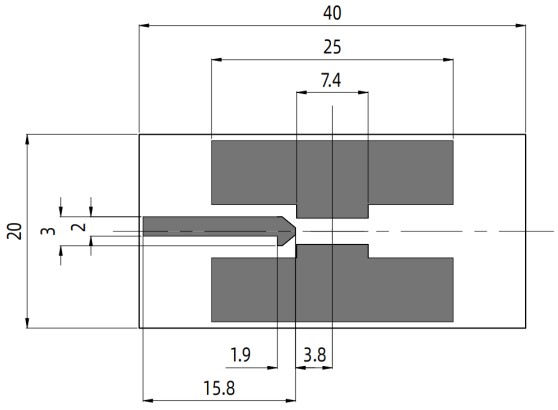
Recommended Test PCB Board

1. For rated currents 30 A



Materials	Base Thickness	Copper Width	Copper Thickness	Number Of board layers
FR-4	0.6 mm	6.0 mm	2.0 OZ	Single Sided Board

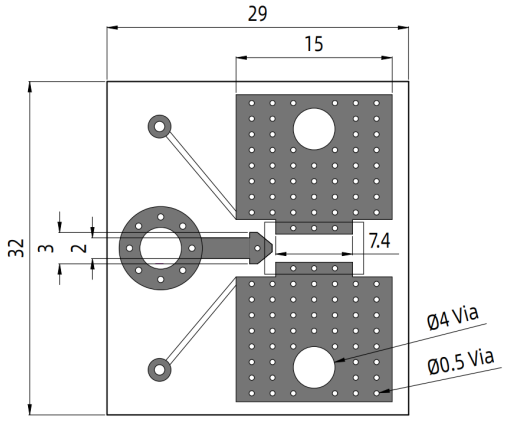
2. For rated currents 45 A & 60 A



Rated Current	Materials	Base Thickness	Copper Width	Copper Thickness	Number Of board layers
45 A	FR-4	0.6 mm	25 mm	1.0 OZ	Single Sided Board
60 A	FR-4	0.6 mm	25 mm	3.0 OZ	Single Sided Board

Recommended Test PCB Board

3. For rated currents 75 A

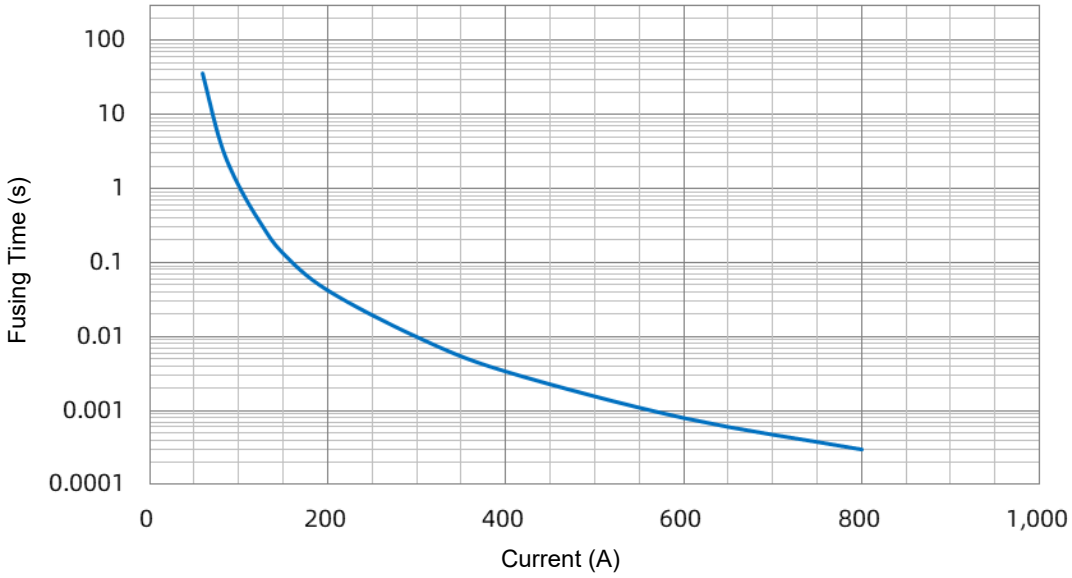


Materials	Base Thickness	Copper Width	Copper Thickness	Number Of board layers	Screw Specifications
FR-4	1.4 mm	15 mm	2.0 OZ	Double Sided Board	M4

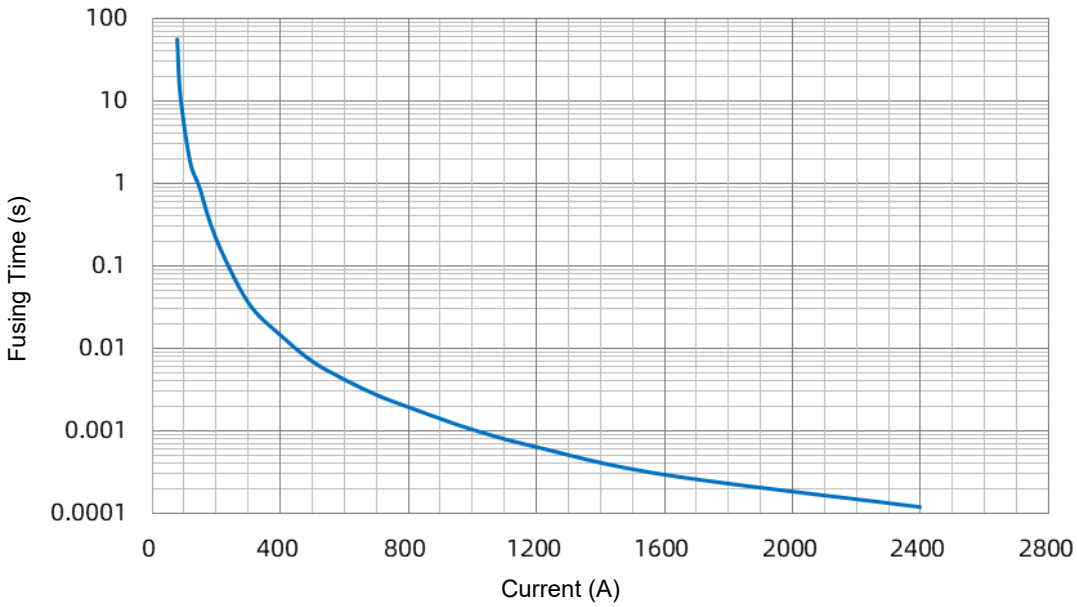
Current-Time Curve (Reference)

The Current-Time curve shows functioning time at multi-times rated current at room temperature.

SHP 30 A Current-Time Curve



SHP 45 A Current-Time Curve



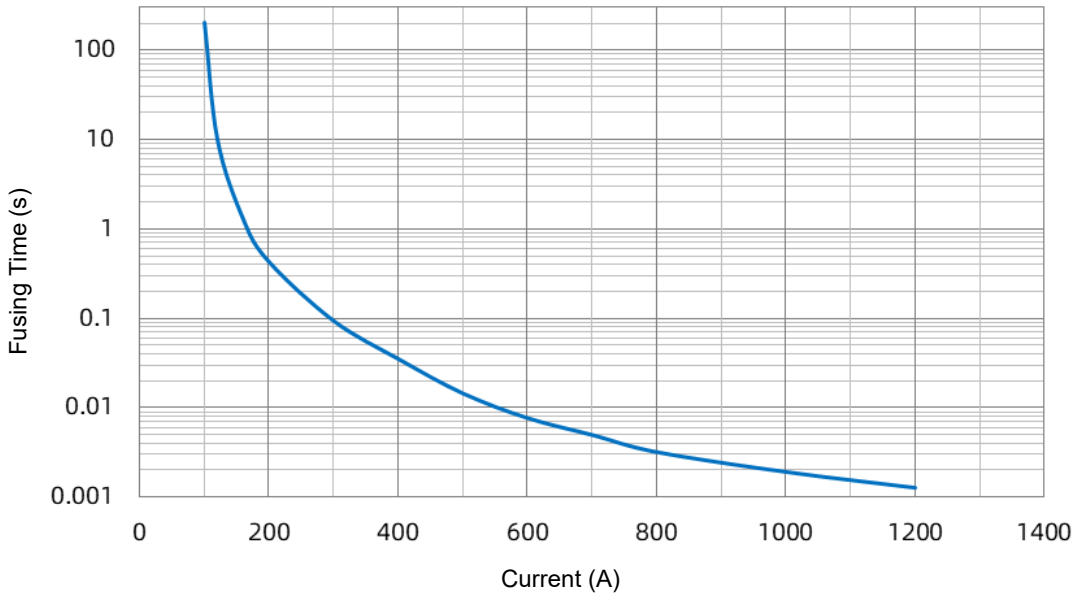
*Note:

1. The values in the table are typical values that we recommend to test PCB board evaluation, Reference product resistances: 1.50 mΩ (30 A), 0.95 mΩ (45 A);
2. Product specifications may be adjusted due to technical upgrades or optimization requirements. Updates will not be notified separately.

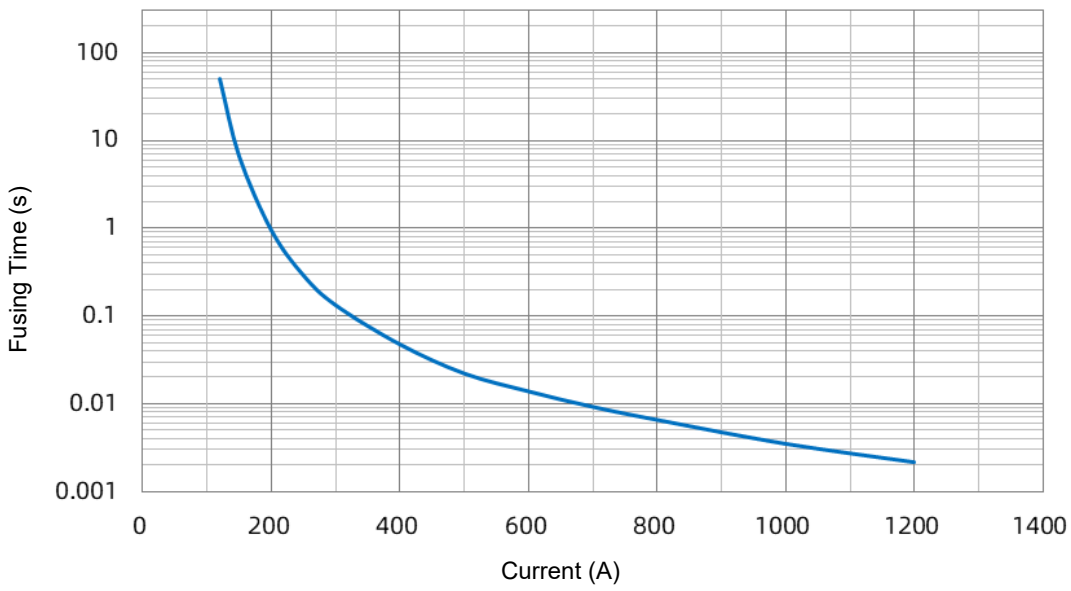
Current-Time Curve (Reference)

The Current-Time curve shows functioning time at multi-times rated current at room temperature.

SHP 60 A Current-Time Curve



SHP 75 A Current-Time Curve

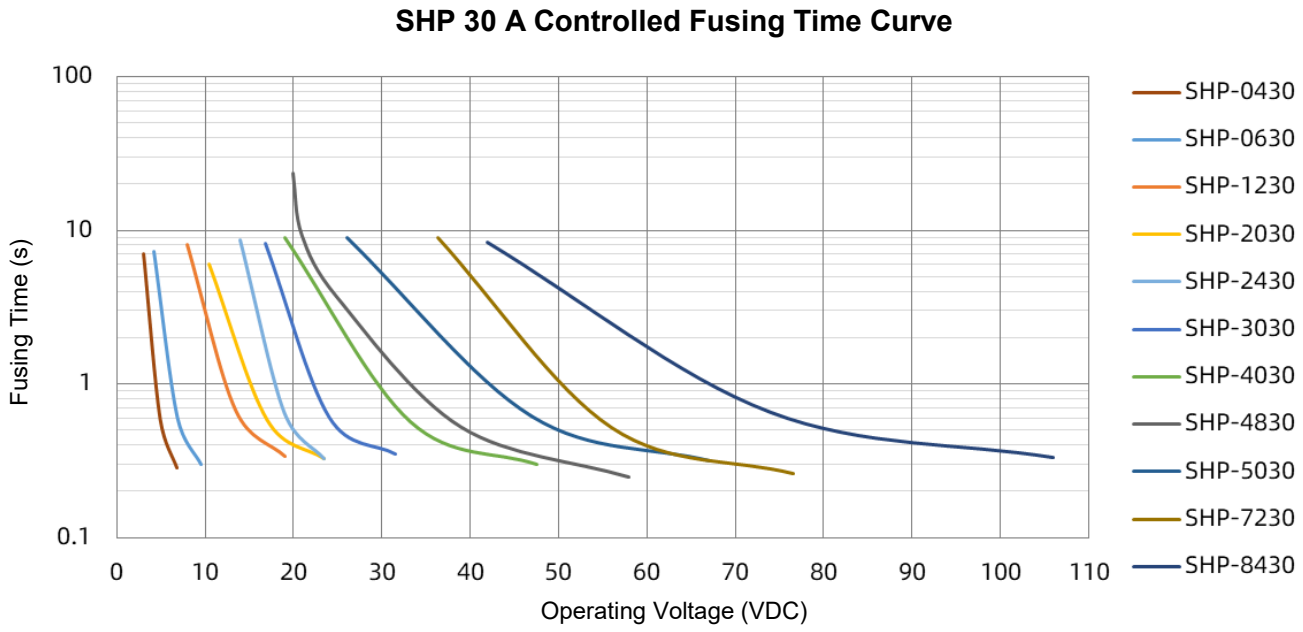


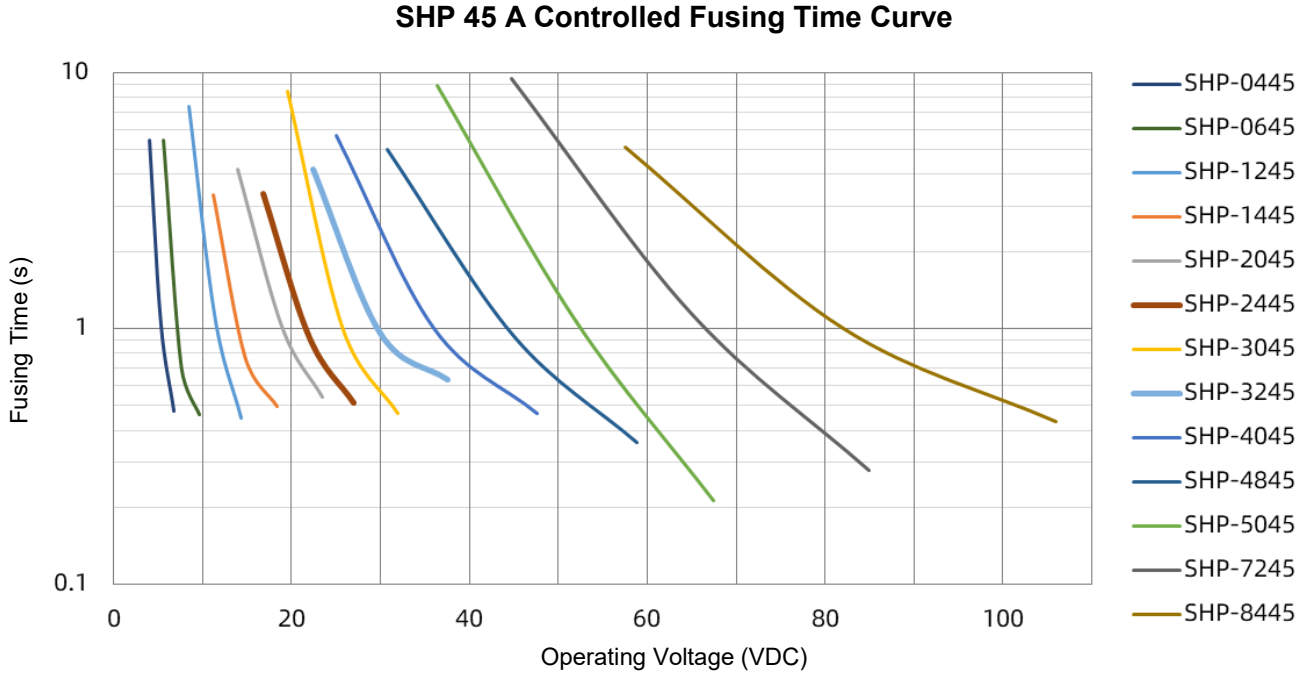
*Note:

1. The values in the table are typical values that we recommend to test PCB board evaluation, Reference product resistances: 0.83 mΩ (60 A), 0.70 mΩ (75 A);
2. Product specifications may be adjusted due to technical upgrades or optimization requirements. Updates will not be notified separately.

Controlled Fusing Time Curve (Reference)

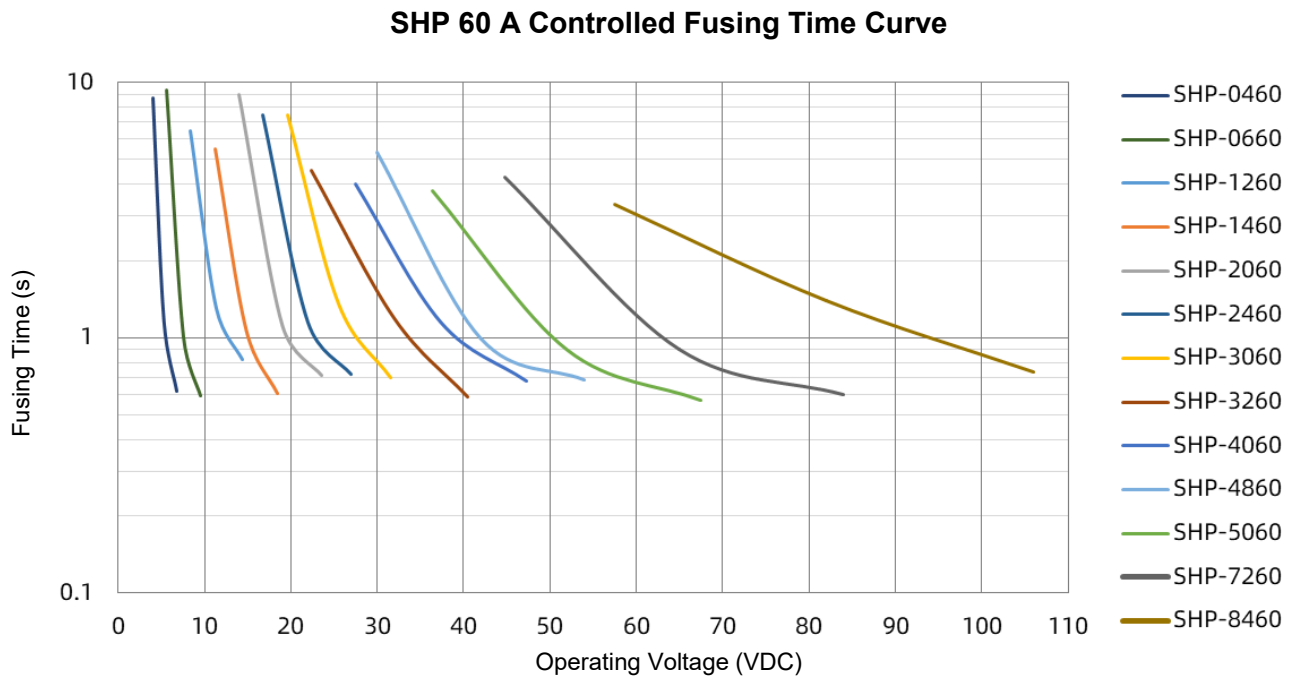
The FH applies the operating voltage at room temperature, and collects the disconnection time of P1-P2.

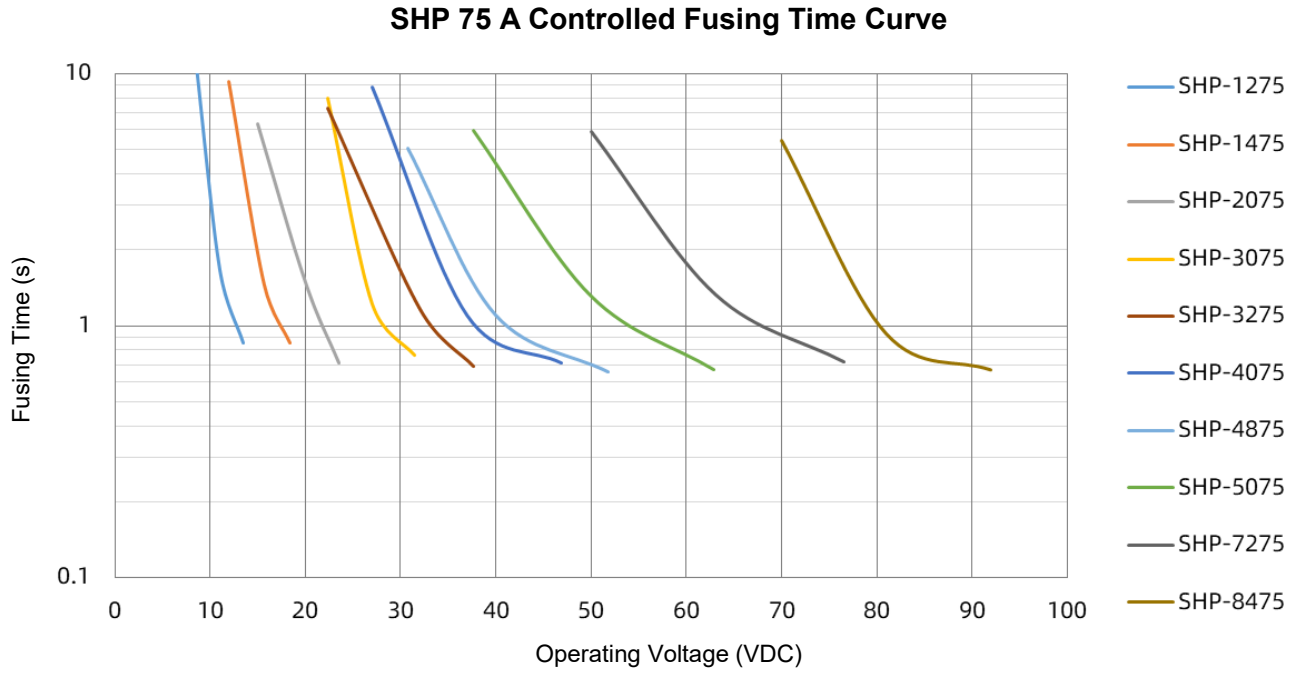




Controlled Fusing Time Curve (Reference)

The FH applies the operating voltage at room temperature, and collects the disconnection time of P1-P2.

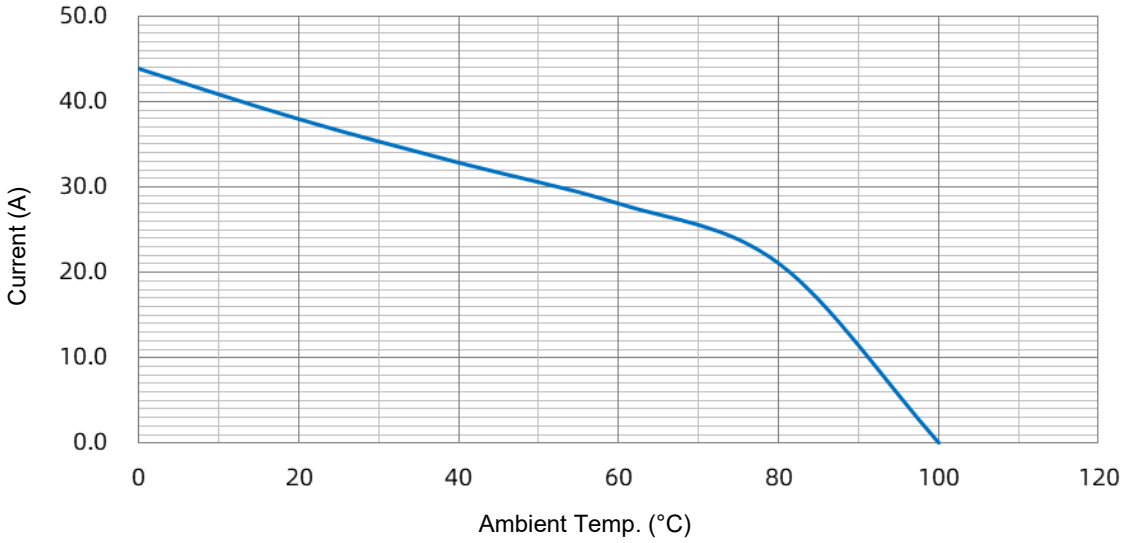




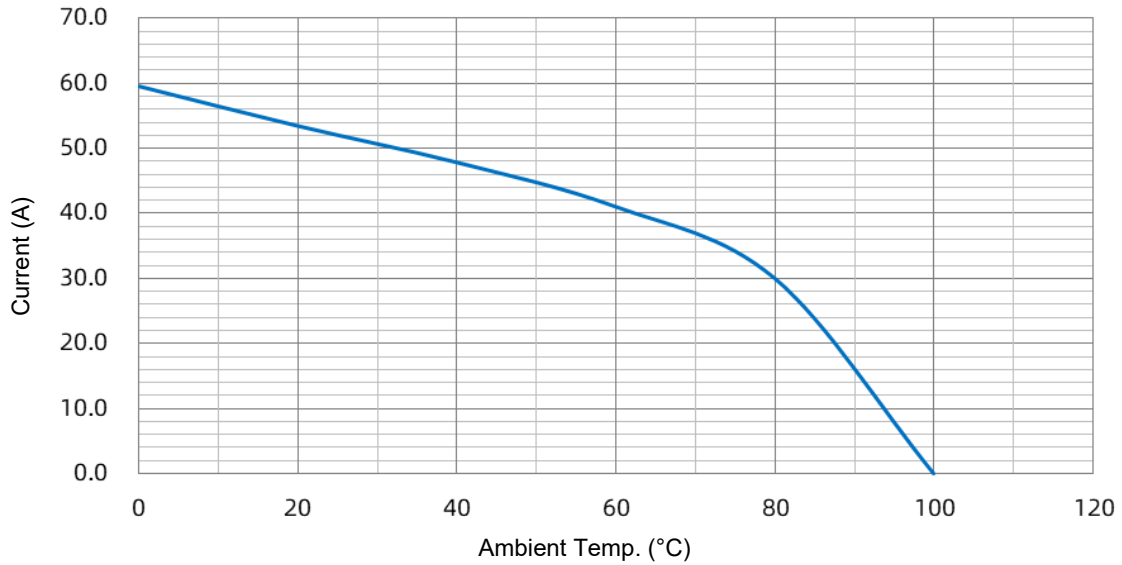
Current Carrying Capacity (Reference)

Under different temperatures apply test current, the surface temperature is 100 °C as the highest point, and the load value is obtained.

SHP 30 A Current Carrying Capacity



SHP 45 A Current Carrying Capacity



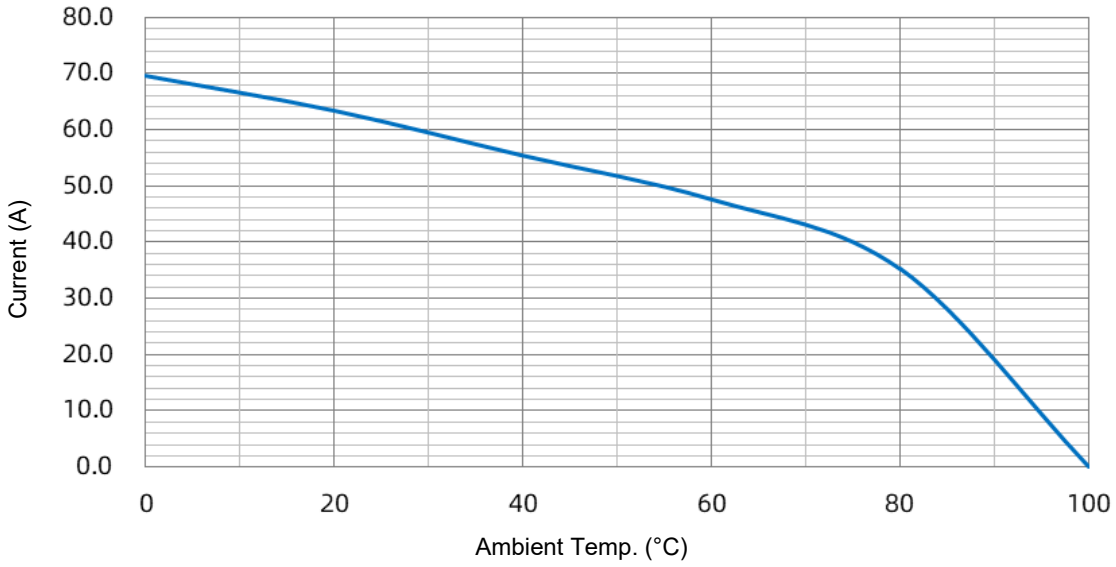
*Note:

1. The values in the table are typical values that we recommend to test PCB board evaluation, Reference product resistances: 1.50 mΩ (30 A), 0.95 mΩ (45 A);
2. Product specifications may be adjusted due to technical upgrades or optimization requirements. Updates will not be notified separately.

Current Carrying Capacity (Reference)

Under different temperatures apply test current, the surface temperature is 100 ℃ as the highest point, and the load value is obtained.

SHP 60 A Current Carrying Capacity



SHP 75 A Current Carrying Capacity

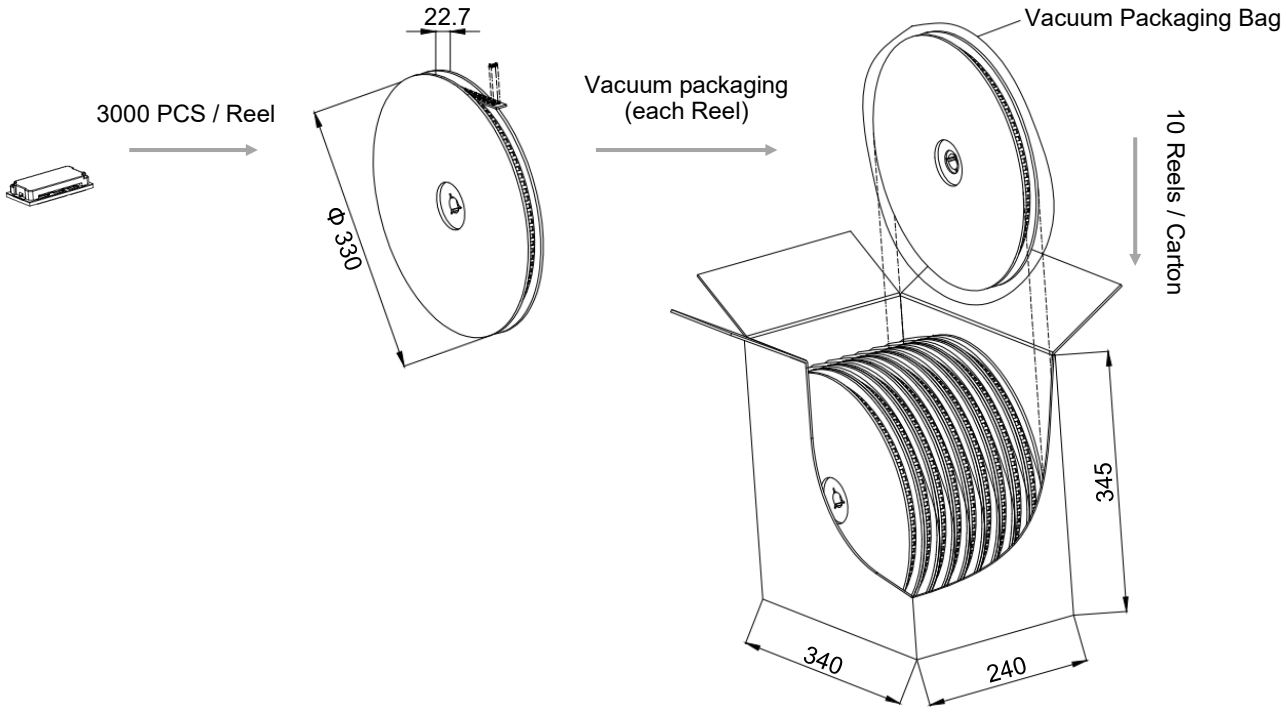
Packaging Information

Item	Reel	Carton
Dimensions (mm)	Φ 330 × 22.7	340 × 240 × 345
Quantity (PCS)	3000	30000
Gross Weight (kg)	1.1 ± 5 %	11.2 ± 5 %



Glossary

Item	Description
HCO	**Heat CutOff (HCO)** With Feed Heater，A Protector that turns on a Feed Heater to cut off circuit.
MC	**Main Circuit (MC)** All conductive components used in switching devices for closing or disconnecting circuits in a circuit.
CC	**Control Circuit (CC)** In addition to the main circuit, all conductive parts of the switching apparatus used in the access circuit as the closing operation and / or opening operation of the switching apparatus.
I_r	**Rated Current** The current used to classify an HCO, which is the Maximum current that HCO allows to carry and is able to cut off the circuit safely.
U_r	**Rated Voltage** The voltage used to classify an HCO, which is the Maximum voltage that HCO allows to carry and is able to cut off the circuit safely.
FH	**Feed Heater** Electric appliances that use electric energy to achieve heating effect.
Breaking Capacity	**Breaking Capacity** Value of prospective current that a fuse-link is capable of breaking at a stated voltage under prescribed conditions of use and behavior.
Range of Operation Voltage	**Range of Operation Voltage** Under specified conditions, the protector can operate normally to disconnect the voltage.

ATTENTION

Usage

1. When atmosphere press is from 80 kPa to 106 kPa, the related altitude shall be from 2,000 meter to -500 meter.
2. Do not touch the HCO body or electrode lead directly when power is on, to avoid burning or electric shocking.
3. It is necessary to foresee there are possibilities that “Current Carrying Capacity” and “Controlled Fusing Time” may be varied along with the condition change in the substrate thermal capacity, etc. therefore you should check it on your PCB. Generally, when thermal capacity of PCB increases, Current carrying capacity will increase accordingly and Cleaning-time will be longer.
4. This product is designed and produced for only general-use of electronics devices. Therefore, we do not suppose that it is used for the. applications [Military, Medical and so on] which may cause direct damages on life, bodies or properties of third party.

Installation

1. Surface mounting.
2. Do not apply mechanical stress to the protection body during or after the installation.
3. Ultrasonic-cleaning or immersion-cleaning and so on must not be done to HCO before and after mounted. When cleaning is done, flux on element would flow, and it would not meet its specification. Moreover, a similar influence happens when the product comes in contact with cleaning-solution. These products after cleaning will not be guaranteed.
4. Please do not re-use of the HCO removed.
5. Please avoid doing resin-coating for HCO. The resin might infiltrate into the product, and it doesn’t meet the specification when the resin-coating is done to this product. These products after resin-coating will not be guaranteed.
6. Make sure that the terminals of this product are connected properly on the circuit board, and the reristance should be in the range of FH resistance between Terminal P1 - P3 and P2 - P3.

Replacement

HCO is a non-repairable product. For safety aspect, it shall be replaced by an equivalent HCO, and mounted in the same way.

Storage

1. HCO must be stored in shaded area where it is not too dusty, with temp. (10 to 30) °C or less with no sudden temperature change, humidity within (30 to 70) % RH, and no corrosive gas in the air. please use them up within 1 year after receiving the goods .
2. This product's terminals use Ag plating. Ag terminals tend to easily get sulfurized or tarnished, please be cautious about their storage environment as follows.

(1) Unopen packages also must be stored under the storage condition described in Storage Section 1.

(2) After opening packages, products shall be sealed in a bag with high gas proof (e.g. aluminum laminated bag), and must be stored under the storage condition described in Storage Section 1.
