

## Description

Heat CutOff (HCO), also known as a three-terminal fuse, is an actuating component designed with overcurrent and overcharge protection functions. The main body of an HCO consists of FH, Fusible Alloy, Flux Resin, Bottom Cover, Cover, Rivet, Sealing strip and Electrode.

The Heat CutOff (HCO) is primarily used in secondary protection schemes for lithium battery charge and discharge circuits, providing redundant protection alongside the primary protection circuit. During the charge and discharge process of lithium batteries, if an abnormal overcurrent occurs, the fusible alloy self-heats and melts, disconnecting the charge and discharge circuit to achieve overcurrent protection. In the event of an overcharge, if the primary protection circuit's IC or the FET in the charge and discharge path fails, the secondary protection IC activates and energizes the Heater of the HCO. This causes the fusible alloy to melt due to the generated heat, disconnecting the charge and discharge circuit to provide overcharge protection. This mechanism ensures dual protection against both overcurrent and overcharge conditions.

The key features of SETsafe | SETfuse Heat CutOff (HCO) SKT series products include: Rated Currents of (120 / 150) A, Rated Voltages of 125 VDC, and an Operating Voltage Range of (8.2 ~ 125.0) VDC. These products have obtained UL, cUL and TUV certifications and comply with RoHS and REACH directives.

## Structure Diagrams

## Product Schematic

- P1 ~ P2 Main Circuit (MC)
- P1 / P2 ~ P3 Control Circuit (CC)

## Features

- Overcurrent Protection
- Overcharging Protection
- Low Impedance, Low Power Consumption
- Controlled Fusing Time  $\leq 60$  s
- Non-Resettable
- RoHS & REACH Compliant

## Application

- Household Energy Storage
- Electric ATV
- Electric lawn mower
- Electric Motorcycle
- UPS

Note:

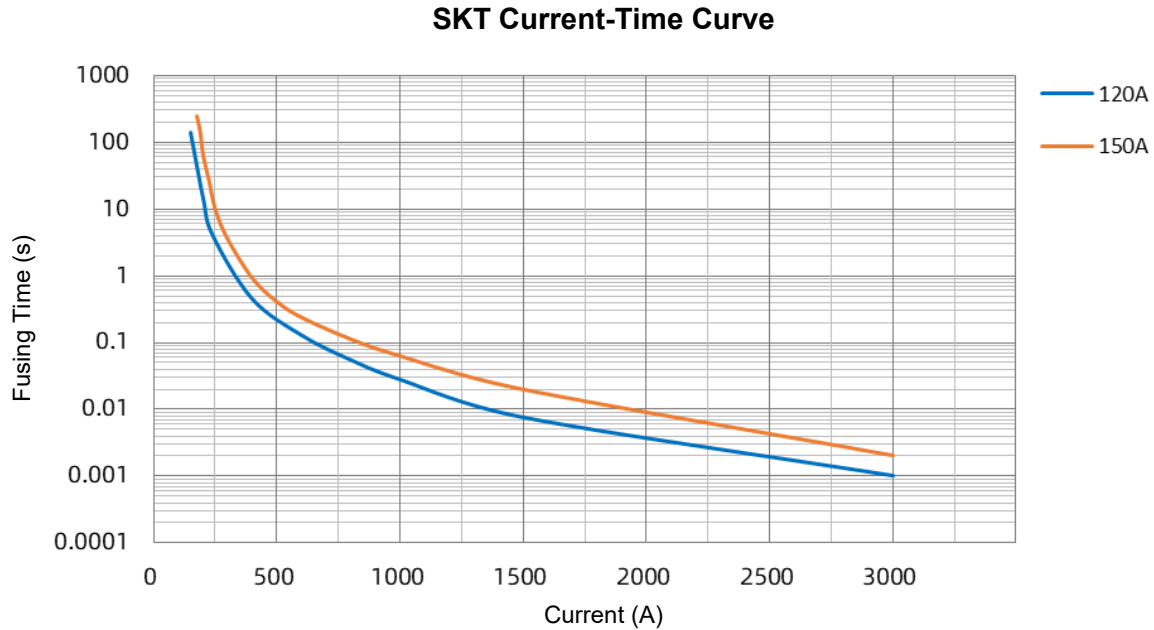

1. For P1 - P2, please refer to the structure diagram.

Recommended test connection terminal (Unit: mm)

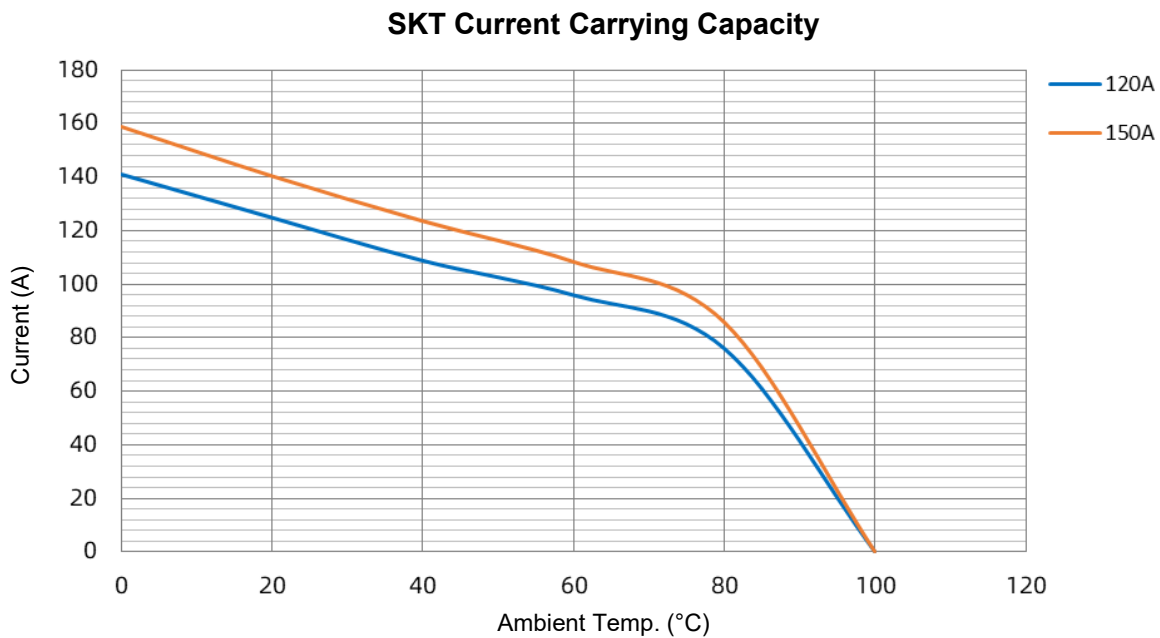

## Current-Time Curve (Reference)

The Current-Time curve shows functioning time at multi-times rated current at room temperature.

## Current Carrying Capacity (Reference)

Under different temperatures apply test current, the surface temperature is 100 °C as the highest point, and the load value is obtained.

\*Note:

1. The values in the table are typical values that we recommend to test copper rows evaluation, Reference product resistances: 0.45 mΩ (120 A), 0.33 mΩ (150 A);
2. Product specifications may be adjusted due to technical upgrades or optimization requirements. Updates will not be notified separately.

## Temp.-Time Curve (Reference)

Under different conditions, Test the disconnection time curve of P1-P2 under 2 times overload current.

**SKT Temp.-Time Curve**

## I²t Curve (Reference)

At room temperature, collects the disconnection time of P1 - P2 under multiples of overload current, curve obtained by the product of squared current and disconnection time.

**SKT I²t-t Curve**

\*Note:

1. The values in the table are typical values that we recommend to test copper rows evaluation, Reference product resistances: 0.45 mΩ (120 A), 0.33 mΩ (150 A);
2. Product specifications may be adjusted due to technical upgrades or optimization requirements. Updates will not be notified separately.

### Power-temp. curve (Reference)

At different temperatures, the heating element applies an operating voltage corresponding to the power, and collects the disconnection time of P1 - P2.

### Power-Time Curve (Reference)

At room temperature, apply the operating voltage within the power range of the heating element, and collect the disconnection time of P1 - P2.

# ATTENTION

## Usage

1. When atmosphere press is from 80 kPa to 106 kPa, the related altitude shall be from 2,000 meter to -500 meter.
2. Do not touch the HCO body or electrode lead directly when power is on, to avoid burning or electric shocking.
3. It is necessary to foresee there are possibilities that "Current Carrying Capacity" and "Controlled Fusing Time" may be varied along with the condition change in the substrate thermal capacity, etc. therefore you should check it on your PCB. Generally, when thermal capacity of PCB increases, Current carrying capacity will increase accordingly and Cleaning-time will be longer.
4. This product is designed and produced for only general-use of electronics devices. Therefore, we do not suppose that it is used for the. applications [Military, Medical and so on] which may cause direct damages on life, bodies or properties of third party.

## Installation

1. Bolt installation.
2. Do not apply mechanical stress to the protection body during or after the installation.
3. Please avoid doing resin-coating for HCO. Resin may block the pressure relief channels of the product and affect its performance, so please avoid resin-coating. These products after resin-coating will not be guaranteed.
4. If adding terminals to electrode leads, make sure the electrode without grease or other foreign matters, and use the same cross-section connection terminal, otherwise the electrode may heat abnormally.
5. If locking with screw, to prevent loosening, please add gasket and use proper screw when installing the product. Ensure that the screw tightening torque meets the requirements.

## Recommended flatness

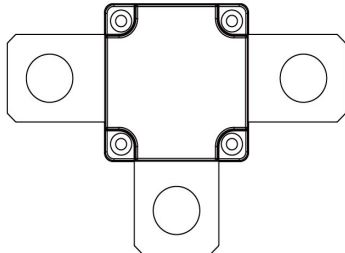

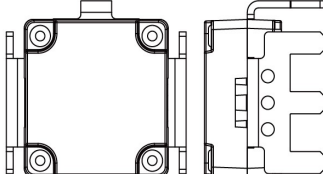

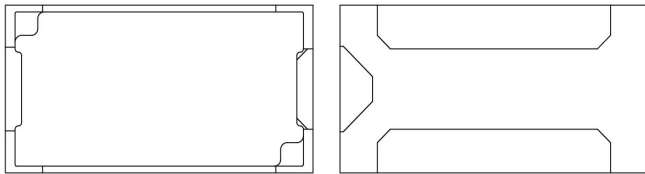

## Replacement

HCO is a non-repairable product. For safety aspect, it shall be replaced by an equivalent HCO, and mounted in the same way.

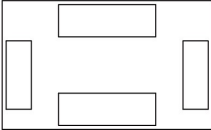

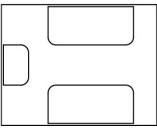

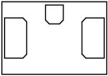

## Storage

1. HCO must be stored in shaded area where it is not too dusty, with temp. (10 to 30) °C or less with no sudden temperature change, humidity within (30 to 70) % RH, and no corrosive gas in the air. please use them up within 1 year after receiving the goods .
